

# QUARTZ COLLECTION

Inspired by the beauty of Quartz, this inspiring surface offers an unprecedented elegance that's guaranteed to enhance any architectural or interior design project.

The 20mm thick tile can be laid directly onto sand or onto concrete slabs. Another alternative is to lay the tile using adjustable, raised supports with open joints allowing for drainage. They have many advantages over alternative outside paving materials. This particular collection is designed to perform exceptionally well under hot, cold and high frost conditions.

The 20mm porcelain tile is easy to install, resistant to thermal shock, frost and fire proof, resistant to household chemicals and swimming pool salts. The quartz tile collection offers multiple surface textures and colours to meet the needs of any indoor or outdoor application.
